Earth and Moon [5th grade]

Trinity University

Canyon Ridge Elementary School (San Antonio, Tex.)
**Unit: Earth and Moon**  
**Grade: 5th**

### Stage 1: Desired Results

**Understandings**

Students will understand that...
- there are similarities and differences in physical characteristics between the earth and moon
- force of gravity keeps planets and moon in orbit
- difference between revolution and rotation
- the sun has specific features
- moon phases

### Essential Questions

- How are the earth and moon alike? Different?
- How do cycles affect earth?
- What role does gravity play in the universe?
- What are the features of the sun?
- How does the sun affect the universe?

### Knowledge & Skill

*(NEISD scope & sequence; TEKS; Core; etc.)*

- **5.12C** – identify the physical characteristics of the Earth and compare them to the physical characteristics of the moon.
- **5.12D** – Identify gravity as a force that keeps planets in orbit around the Sun and the moon in orbit around the Earth.
- **5.6A** – Identify events and describe changes that occur on a regular basis such as in daily, weekly, lunar, and seasonal cycles.

### Stage 2: Assessment Evidence

**Performance Task:**
1. Students will create a model or project of solar system, sun, and moon. (assess with rubric)
2. Students will complete a monthly lunar calendar.

**Other evidence:**
1. Put cycle cards in order.
3. Put planets in order.
4. Quizzes-throughout the unit

### Stage 3: Learning Activities

1. Science Notebook – students will keep a scrapbook of notes, experiments, and learning activities for the Earth, Sun, and Moon Unit
2. Bill Nye – solar system (review 3.11 C)
3. S & K Associates – *Order the Planets*, students read clues to place planets in order
4. Beach ball, baseball, ping pong activity to demonstrate revolution/rotation (WB174 with science test)
5. Read D6-D11 in 5th grade Science textbook
6. FOSS Planetary Science, Investigation 3
7. Using characteristic cards of Earth and Moon- students sort cards and place on Venn Diagram
8. KRLN/Unitedstreaming video Moon and Earth characteristics- refer back to Venn diagram to make
corrections.
10. Earth vs. Moon quiz
11. Moon Book by Gail Gibbons – read aloud to introduce phases of the moon
12. Moon rotation activity to show phases – Styrofoam, flashlight, and lamp (discuss seasons, tides) (textbook)
13. Students will read “What Causes Tides” – NEISD teacher only
15. Moon phases calendar – students will keep a record of the phases of the moon for an entire month
16. D30 – D35 Sun’s energy and layers & Bill Nye on Sun
17. Drawing a cross section of the sun – labeling all physical features (assess with rubric)
19. Using note sheet review characteristics of the sun
20. Use Sciencesaurus (Great Source Education Group) to complete the reading guide.

Moon Phase Monthly Project

100  The calendar is complete. The moon phases are shaded correctly; i.e. the shadow and light pattern clearly moves from right to left. The full moon and new moon are in the correct position.

85  The calendar is complete. There are minor errors in the moon phase shading, but the full moon and new moon are in the correct position.

75  The calendar is complete. There are moon phase shading errors in several spots. The full moon and new moon are in the correct position.

65  The calendar is complete, but has significant errors. The moon phase pattern is incorrect. The full moon and new moon may or may not be in the correct position.

50  The calendar may or may not be complete. There are significant errors in the shading pattern. The full moon and new moon are not in the correct positions.
Scavenger Hunt - ScienceSaurus

Pages 226 -233

1. The _______________ is in the center of our solar system. Everything _______________ around the sun.

2. The sun is mostly made up _________________ gas.

3. How long does it take the Sun to rotate?

4. ________________ is a force that pulls objects toward each other.

5. An _______________________ is the path one object takes around another object.

6. One trip around the sun is called a _________________.

7. One revolution around the sun is the planet’s _______________.

8. TRUE or FALSE  Planets are larger than the sun.

9. ________________ is the largest planet.

Using the information that you read about the planets, answer the following questions.

10. Which planet’s atmosphere is made up hydrogen, helium, and methane gas?

11. Evidence shows that Neptune’s surface is made up of rock, __________ water, and frozen _________________.

12. Which planet has the largest set of rings?

13. Why do we call Mars the “Red planet”?

14. TRUE or FALSE  Asteroids do not have an atmosphere.

Fill out the chart using the information in the book.
